HertzFlow

# Monthly Report

# 1.0

## Executive Summary

HertzFlow achieved critical progress this month across system performance architecture optimization, mobile experience adaptation, and advanced trading mechanism research. Cross-functional execution maintained a stable rhythm, with clear product and technical paths forward.

### Four Primary Tracks

#### Oracle/Keeper

- DB & Keeper refactored, tx times reduced to 3-5s.

#### Trade

- Advanced trading technical frameworks initiated.
- Frontend contract integration reached ~70% completion.

#### Pools / Vaults

- H5 architecture completed.
- Caching & rendering optimized.

#### Release Readiness

- Full-stack automated testing suite established.
- Daily smoke tests and automated bot scripts sustained.

### Key Achievements

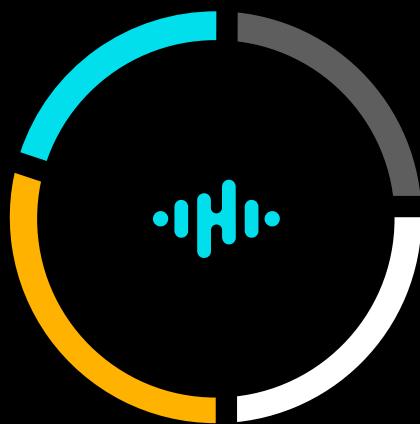

#### Product & Design

- Delivered the latest iterative release and finalized data definitions. Advancing Vault UI, display optimizations, and PRDs.

#### Technical Progress

- Frontend contract integrated; mobile data caching optimized.
- Backend deployed Keeper primary/backup nodes and resolved TPS bottlenecks.
- Validated extreme-market liquidation logic and reviewing core contract parameters.

# Key Deliverables

■ PM & PD

■ FE

■ BE & SC

■ QA & Ops

---

## PM & PD

- Iterative release & data definitions finalized.
- Vault UI refinements & Balance display advancing.
- Advanced trading PRD alignment ongoing.

---

## FE

- H5 Pool & Vault pages completed.
- Smart contract integrated.
- Mobile caching & rendering optimized.

---

## BE & SC

- Keeper primary/backup nodes deployed.
- Transaction time reduced to 3–5s.
- Core contract parameters under review.
- Extreme-market liquidation logic validated.

---

## QA & Ops

- Full-stack automated test suite established.
- Daily stress tests & bot scripts sustained.

# Key Progress

## Technical Progress

**Engineering efforts have shifted toward enhancing base-layer concurrency and refining data architecture, ensuring high availability under extreme load scenarios.**

- Keeper System: Implemented multicall and multi-address execution support. Deployed primary/backup nodes to ensure high availability during extreme network loads.
- Database & Optimization: Integrated Redis caching and batch processing for high-frequency queries, successfully cutting transaction confirmation times to 3-5 seconds.
- Data Sync & Consistency: Fixed external node event-dropping issues and deployed a block-scanning backup mechanism to guarantee absolute on-chain state accuracy.

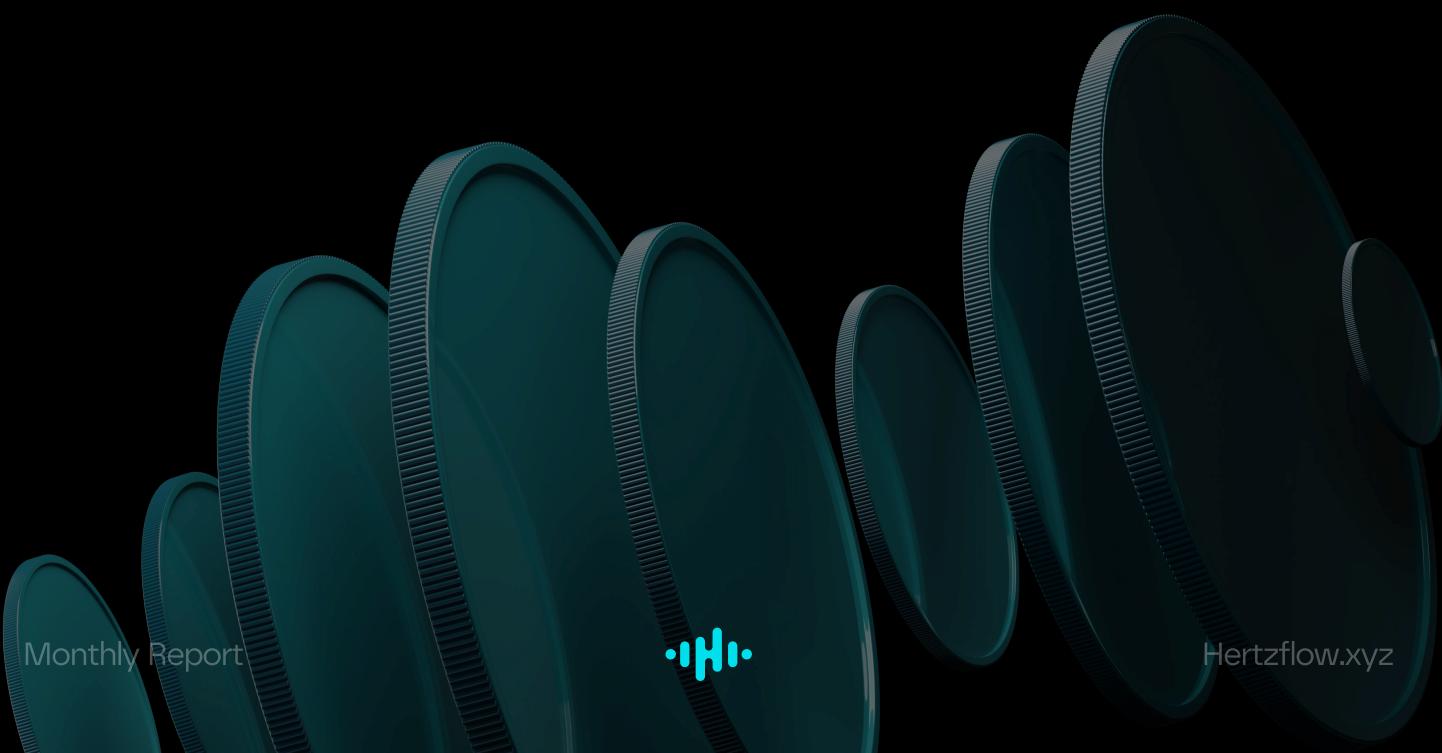

1.2

## Key Progress

### Product Experience

**Product initiatives are currently prioritizing seamless interactions and transparency, with core workflows stabilizing into a phase of detailed refinement.**

- Mobile Experience (H5): Completed H5 architecture for Pool and Vault pages. Revamped data fetching and caching mechanisms to drastically improve mobile load speeds.
- UI & Core Components: Standardized and advanced UI optimizations for Vault, balance displays, and trading charts to enhance visual hierarchy.
- User Trust & Feedback: Launched a real-time RPC status indicator to improve trade certainty and reduce user friction during periods of network latency.

# 1.2

## Key Progress

### Ecosystem & External Readiness

External integrations and testing methodologies are actively scaling up, ensuring the protocol's infrastructure remains highly resilient across diverse market conditions.

- Testing Automation: Benchmarked mature industry protocols to establish a comprehensive, full-stack automated testing suite for both frontend and smart contracts.
- Infrastructure Resilience: Conducted extreme-case stress evaluations on external RPC providers and instituted robust fallback plans to prevent critical data loss.
- Protocol Elasticity: Enabled remote configuration support for Token parameters, laying a flexible foundation for broader asset coverage and cross-chain scalability.

# 1.3

## Current Progress

PM & PD	Core Release Delivered	<div style="width: 100%;"><div style="width: 100%;">█</div></div>	100%
PM & PD	Advanced Trading PRDs	<div style="width: 80%;"><div style="width: 80%;">█</div></div>	80%
BE & SC	Keeper Concurrency Upgrade	<div style="width: 100%;"><div style="width: 100%;">█</div></div>	100%
BE & SC	Database Architecture	<div style="width: 100%;"><div style="width: 100%;">█</div></div>	100%
FE	Mobile (H5) Architecture	<div style="width: 100%;"><div style="width: 100%;">█</div></div>	100%
FE	Upgraded Contract Integration	<div style="width: 70%;"><div style="width: 70%;">█</div></div>	70%
QA & Ops	Automated Test Suite	<div style="width: 90%;"><div style="width: 90%;">█</div></div>	90%

## Risks & Status

Risk	Impact	Status
Advanced trading models	Requires parameter sync	Under review

**2.0**

## Next Month Objectives

# 2.1

## Key Execution Focus

Team	Target	Description
FE / BE / SC	Advanced trading alignment	Validate architecture & logic
SC	Contract maintenance	Ongoing contract operations and core parameter review
PM / Design	Trading PRDs	Finalize user flows
FE	UI Integration	Finalize contract mappings
Keeper / BE	Data APIs	Complete backend analytics
QA / Ops	Automated testing expansion	Perfect automated cases and execute daily smoke tests

# 2.2

## Milestones

1

Mar Week 1 - 2

**Advanced trading PRD finalized**

Team: PM / Design

**Contract integration sweep verified**

Team: FE / BE

2

Mar Week 3

**Market page performance tuning complete**

Team: FE / BE

**Chart API & UI integration validated**

Team: FE / BE

3

Mar Week 4

**Monthly checkpoint & scope convergence**

Team: ALL

# 2.2

## Upcoming Schedule

### Project Development Gantt Chart (2026 Mar)

Period: 03/01 – 03/31 · Time Slots: Week · Team: Colored

FE BE SC Keeper PM & PD QA & Ops
