HertzFlow

Monthly Report

1.0

Executive Summary

HertzFlow delivered **solid progress** this month across **testnet readiness, core trading and liquidity flows**, and **execution infrastructure (Oracle/Keeper)**. Cross-functional execution remained **predictable and well-coordinated**, with a **clear path** toward the upcoming end-to-end rehearsal and the next release cut.

Four Primary Tracks

Oracle/Keeper

- Multi-node stability and gas strategy strengthened; trigger reliability improved.

Trade

- Core user journey validated; testing advanced to ~50% with structured bug-fix iterations.

Pools / Vaults

- Liquidity flows integrated end-to-end.

Release Readiness

- Docs and website test environment closed out; daily smoke tests & bot runs sustained.

Key Achievements

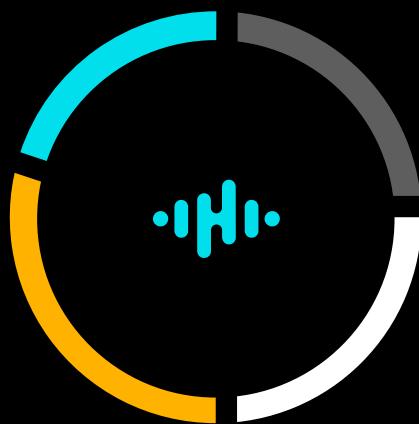

Product & Design

- Completed official website revision and Dashboard PRD.
- Initiated comprehensive testing with approximately 50% coverage.
- Docs updates pushed to production.

Technical Progress

- Multi-keeper solution design and implementation, including freeze & ADL logic.
- Contract architecture parameters are under focused review and configuration.

Key Deliverables

■ PM & PD

■ FE

■ BE & SC

■ QA & Ops

PM & PD

- Official website revision completed.
- Comprehensive testing covering.
- Dashboard PRD completed.

FE

- Integrated with smart contract and self-tested.
- BNB Testnet environment integration set up.

BE & SC

- Data sync & BNB testnet migration completed.
- Multi-keeper architecture designed and deployed.
- Support for hyper leverage ongoing.
- Critical parameters configured.

QA & Ops

- Test cases & automation scripts deployed.
- Ongoing testing coverage.

Key Progress

Technical Progress

Engineering moved from feature buildout into system integration and testnet rehearsal, with execution reliability and regression readiness as the primary focus.

- Smart Contracts: Deployed to BNB Testnet and FE/BE integration completed.
- Keeper System: Multi-keeper solution designed and implemented. Frozen order and ADL logic completed and deployed.
- Backend & Contracts: Data validation scripts ensure statistical accuracy, entering pre-deployment validation phase.
- Testing & Operations: Test cases established with automated testing scripts deployed. Automated trading bot scripts running on testnet at 10 transactions/second sustained load. Daily smoke testing maintained stable operation.

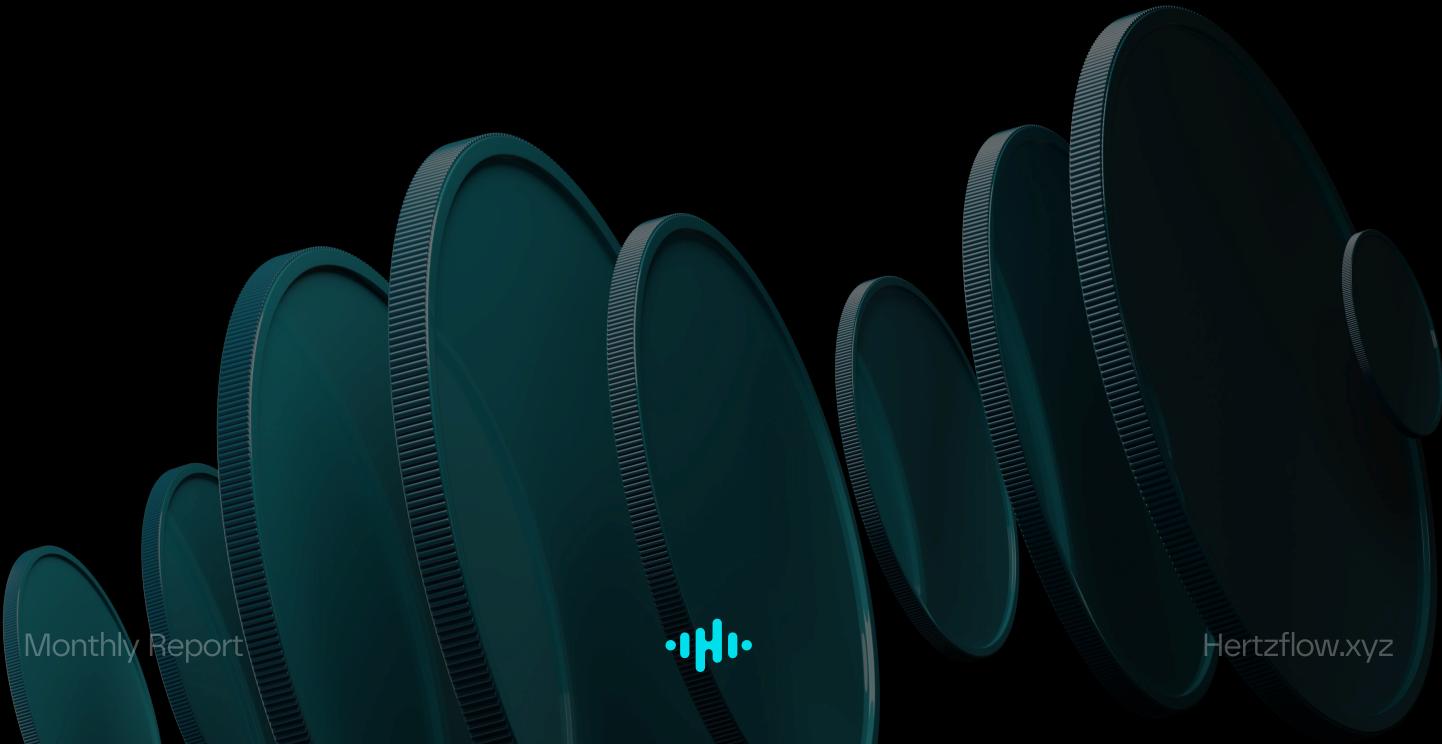

1.2

Key Progress

Product Experience

Product efforts are currently focused on release readiness and user trust, and the experience framework is stabilizing across core flows.

- Official Website: Revision PRD completed covering animation design details and content modifications. Development reached approximately 80% with main page structures finalized.
- Trade Page: Testing coverage reached approximately 50% with issue documentation in progress. UI refinement and bug fixing underway.
- Pools & Vaults: UI optimization completed with progressive data loading reducing UI blocking.

1.2

Key Progress

Ecosystem & External Readiness

Overall, security, oracle design, and cross-team coordination are progressing in parallel. These efforts collectively strengthen the protocol's risk framework, oracle robustness, and execution alignment across teams.

- Security & Risk Research: Historical contract attack case research ongoing to inform risk parameter design.
- Oracle Design Research: Oracle paper preliminary draft completed focusing on permissionless decentralized oracle solution.
- Internal Collaboration: Bi-weekly alignment meetings established to ensure cross-team coordination.

1.3

Current Progress

PM & PD	Official Website Revision	<div style="width: 100%;"><div style="width: 100%;">█</div></div>	100%
PM & PD	Test Coverage	<div style="width: 50%;"><div style="width: 50%;">█</div></div>	50%
BE & SC	Multi-Keeper Architecture	<div style="width: 100%;"><div style="width: 100%;">█</div></div>	100%
BE & SC	Data Sync & Migration	<div style="width: 100%;"><div style="width: 100%;">█</div></div>	100%

Risks & Status

Risk	Impact	Status
USDC → USDT migration adaptation required	Impacts contract and frontend integration	Tuning in progress

2.0

Next Month Objectives

2.1

Key Execution Focus

Team	Target	Description
FE / BE / SC	Stablecoin adaptation	Validate change of stablecoin, and disabled market user flow
SC	Deploy contracts with updated parameters	Testnet production deployment
PM / Design	Dashboard PRD finalization	Complete analytics module requirements
PM / Design	Parameters configuration	Align parameters with contract team
FE	H5 Development	Finalize H5, website functionality, and USDC→USDT adaptation
Keeper / BE	Post-contract-change integration	Unified adjustments
QA / Ops	Stability verification	Validate performance testing
QA / Ops	Testnet production deployment testing	Daily smoke tests

2.2

Milestones

1

Feb Week 1 - 2

**End-to-end rehearsal
with updated contracts**

Team: FE / BE / SC

**Adaptation completed
and verified on testnet**

Team: PM / QA

2

Feb Week3

**Parameter set locked
and validated**

Team: PM / SC

H5 UX review complete

Team: PM

3

Feb Week4

Monthly checkpoint & scope convergence

Team: ALL

2.2

Upcoming Schedule

Project Development Gantt Chart (2026 Feb)

Period: 02/01 – 02/28 · Time Slots: Week · Team:
